

HOW TO CLEAN ONYX PRODUCTS

The simplest option is white vinegar - a natural cleaner that works well. White vinegar often works the best when faced with hard water/soap film deposits. Use straight white vinegar with a sponge or a nylon/plastic bristle scrub brush. For extreme situations with stubborn mineral or soap buildup, try soaking a paper towel or two in straight white vinegar and then laying it on the affected area. After about 30 minutes, use your scrub brush to break down and remove any excess buildup. It may take a couple of these treatments when hard water buildup is thick.

TIP

A surface protectant (similar to Rain-X on a windshield) will keep water spots and deposits from forming and can make cleaning Onyx even easier.

Approved Cleaners

- Scrubbing Bubbles Soap Scum Remover
- Eliminate Shower & Tub Cleaner
- Kitchen & Bathroom Kaboom
- Clorox (cleaners or wipes)
- White Vinegar
- Lysol
- CLR

Not Approved Cleaners

- Any abrasive cleaner
- The Magic Eraser
- Soft Scrub
- Comet
